

THE ATTUNITY INTEGRATION SUITE

The Attunity Integration Suite (AIS) simplifies, accelerates, and enables real-time integration of data, applications and the capture of business events as they happen.

"The real-time data Attunity delivers has breathed new life into our Website. Beyond its value to the IT department, it brings a tremendous amount of value to our consumers."

Accuweather

Benefits:

- Accelerate integration projects with easy to use, pre-built solutions
- Maximize the utilization of existing legacy systems
- Achieve a single view of enterprise information
- Create a real-time, event driven enterprise
- Reduce risk with proven and standards-based software
- Reduce the cost of ownership of enterprise data integration
- Increase ROI with support for multiple IT initiatives with a single solution

Real-time data integration and event capture

The Attunity Integration Suite (AIS) simplifies the access and integration to enterprise data and legacy systems, and enables real-time integration of data, applications and the capture of business events as they happen.

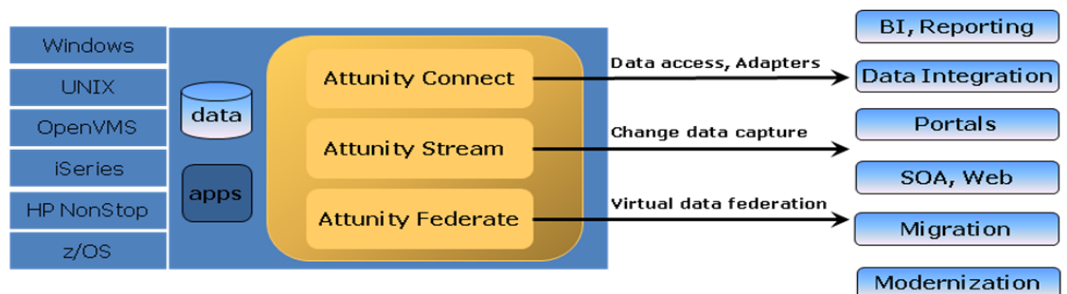

AIS is a modular software suite consisting of three product lines:

- **Attunity Connect – for data connectivity and application adapters**
- **Attunity Stream – for change data capture (CDC)**
- **Attunity Federate – for virtual data federation (EII)**

AIS allows organizations to address different tactical needs quickly, while relying on a comprehensive platform that allows reusability and can address many needs. With AIS, organizations have a foundation for rapid and standard integration, the ability to reduce the risks of data and event integration, and reduce the total cost of ownership (TCO). With AIS, you can leverage and incorporate existing data and application assets in:

- Business Intelligence (BI) and Data Warehousing (DW)
- Data Integration and Synchronization
- Application Integration (EAI) and SOA
- Enterprise Portals
- Legacy Migration and Modernization

Attunity Integration Suite

Today, AIS is available on platforms ranging from Windows to mainframes and supports the widest array of enterprise data sources and applications. It is installed in many of the leading organizations around the world, and has been selected as the technology of choice by software industry leaders, including Oracle and Microsoft, who embed our technology within their own offerings.

"Penske Logistics has built its business on great customer service, made possible with reliable and timely information. With Attunity operating in our diverse environment, we are able to perform critical tracking, tracing, and posting of tasks that support our just-in-time services. This gives us the capabilities for real-time quality control."

Penske Logistics

"We needed a solution that can access numerous types of data source in real time. We have decided to standardize on Attunity's integration platform and have realized considerable ROI, especially with our CDC solution. It has allowed us to reduce our batch window as well as CPU resource consumption by leveraging the higher performance, throughput and by off-loading processing from our mainframe."

The Attunity Integration Suite:

ATTUNITY CONNECT

Data Connectivity: direct, standards-based connectivity to enterprise data

Attunity Connect provides universal connectivity to many enterprise data sources, relational and non-relational, on platforms ranging from Windows to mainframes, making the deployment of new projects, integration of existing systems and other projects extremely fast, highly performant and very cost effective. Attunity Connect's ODBC drivers, JDBC drivers, OLE DB providers, and ADO.NET providers enable virtually any business application to access the information it needs.

Application Adapters: simplified, seamless connectivity with applications

Attunity Connect simplifies the integration with enterprise applications on a broad range of platforms ranging from Windows to mainframes. Attunity Connect adapters turn existing business logic into reusable services that can be used from Java and .NET applications, as well as from leading integration infrastructure including Oracle Fusion Middleware and Microsoft BizTalk Server. Using Attunity Connect Application Adapters, existing applications can be service-enabled, easily integrated, migrated and modernized quickly, and very cost effectively.

ATTUNITY FEDERATE

Virtual Data Federation for Enterprise Information Integration (EII)

Attunity Federate creates single views of business information (e.g. Single Customer View) and makes it simple for business users to access information in multiple data silos, without the need for application coding, making complex multi-database reporting, data migrations and other projects extremely simple and much more cost effective. With Attunity Federate, you can access disparate data sources as if they are part of a single catalog, and define single views of enterprise data.

ATTUNITY STREAM

Change data capture (CDC) for efficient, real-time data integration/event capture

Attunity Stream is a log-based, real-time CDC software product that captures and delivers only the changes made to operational and transaction systems and data sources. Attunity Stream's low-impact technology eliminates the need for bulk data updates in valuable batch windows, and streams changed data to secondary databases such as data warehouses, reporting databases or replication databases, and can be used with ETL, EAI, or home-grown applications. By using Attunity Stream, valuable real-time information can be delivered to those who need it, while dramatically reducing costly existing system resource requirements.
