

Major Insurance Firm Speeds Up the BI Supply Chain with Attunity Replicate

For more than a century, this major insurance firm has been committed to helping their individual and corporate customers with an array of insurance, financial and banking products.

The Challenge

Acquiring data from disparate systems from multiple vendors was a very complex and manual process for this major insurance firm. Even with the best toolsets, processes and people, they found that the best analytics solution was useless without data from the administrative systems. They had a data integration challenge that needed immediate attention.

The Solution

The team was looking at log-based data replication solutions to meet their data integration challenges. They chose Attunity Replicate because of its:

- wide support of different sources and targets
- ease-of-use
- tight integration with Teradata

Working Together – Today and Tomorrow

Attunity Replicate has helped this major insurance firm in multiple ways including:

- Elimination of 'Full Copy ETLs' for one large system saving time, resources, and overhead
- Saving five hours of time for a weekly batch load process
- Performing delta loads for a system that they had not been able to do so via other means
- Rapid addition of new systems to the Teradata platform

As the firm looks forward to additional investments in analytics toolsets like Hadoop, they know that Attunity Replicate can help them move their data to that platform continuously. They know that they can speed up the business intelligence (BI) pipeline with a proven data replication solution which means that they can serve their customers with a high level of service.

“The higher we climb to empower analytics, the farther we can see. Using Attunity Replicate, we have the ability to add new sources rapidly to Teradata Analytic Platform.”
