

Standard Data Access & Comprehensive Adapter Suite

Attunity Connect unlocks data sources and makes legacy applications seamlessly interoperable. With Attunity Connect, you can:

- Seamlessly access legacy data for initiatives such as business intelligence and enterprise portals
- Build .NET and Java/J2EE applications that interact with legacy systems
- Accelerate EAI initiatives with certified adapters

Attunity Connect provides universal integration for both data-oriented integration (based on SQL) and service-oriented integration (based on XML and Web Services). It supports a comprehensive list of data sources and applications, on platforms ranging from Windows and UNIX to HP NonStop and Mainframes.

Key Benefits

- Accelerate integration projects
- Reduce implementation risk
- Reduce cost of ownership
- Maximize utilization of existing legacy systems
- Increase ROI by supporting multiple IT initiatives using a single solution

“Because Attunity Connect supports over 23 other data sources on 14 platforms, it gives us a single interface to all enterprise data, regardless of the platform or database in which the data resides.”
-Washington State University

Attunity Connect Components

SQL Query Processor

The Query Processor (QP) provides optimized query execution of SQL client requests. It provides the query processing services for non-relational data sources making them behave like relational data sources. The QP also guarantees data integrity with transaction management support.

SQL Query Governor

The Query Governor provides a safety net for running queries against operational data sources, enabling it to define rules that stop bad queries from affecting the system's service level.

XML Service Processor

The XML Server Processor handles incoming XML client requests. It validates the request, translates it into calls to native adapters and returns a response in XML format. The processor supports advanced features such as transaction management and request batching.

XML Event Services

Attunity Event Services provide message-oriented integration between Attunity Servers and enterprise applications (e.g. Application Servers, ETL, Integration Brokers).

Metadata Management

Attunity provides metadata management that allows organizations to import and control data models from legacy applications and data sources. For non-relational data sources, Attunity further enables you to define mappings to an enhanced relational data model.

Native Adapters

Attunity provides pre-built adapters to over 35 data sources (relational, network, indexed, hierarchical, object, and flat-file data) on over 25 computing platforms. Native adapters take advantage of platform-specific features to improve performance.

Supported Systems:

Relational	Non Relational	Applications	Platforms
DB2	Adabas	COBOL	OS/390, z/OS
DB2/400	Delimited text	CICS & CICS Queue	AS/400
DBMS	C/D ISAM	IMS/TM	HP NonStop
Informix	Enscribe	Natural	OpenVMS
Ingres	Flat Files	RPG	UNIX
Oracle	IMS/DB	Pathway	Linux
Oracle Rdb	RMS	Tuxedo & Tuxedo Queue	Windows
SQL/MP	QSAM	Any 3GL	
SQL Server	VSAM		
Sybase			

Key Information:

Accelerate integration projects

- Deliver more business value faster by taking advantage of Attunity's off-the-shelf products.

Reduce implementation risk

- Attunity Connect has been proven in thousands of customer implementations around the world.

Reduce the cost of ownership

- Unlike hand-coded solutions, Attunity Connect is easy to implement and maintain.

Increase ROI

- Maximize the utilization of your legacy systems. Unlock valuable business data using Attunity Connect to provide enterprise data integration for multiple IT initiatives.

"Attunity Connect is very straightforward to use. It gives us the high quality data we need to turn internal business processes and fixed resources into flexible commercial services."

Stuart Allen, Convergence Program Manager, Lloyd's of London
