

Automate the Deployment of Web Content, IIS, Applications & Code

A deployment platform for enterprise server, web operations, shared hosting and data center operations teams, Attunity RepliWeb (formerly known as R-1d) delivers quantifiable improvements to IT operations associated with deployments. Attunity RepliWeb offloads time-consuming manual tasks by automating processes, speeding release cycles and ensuring content and code continuity.

Business Benefits

- Bridge the gap between IT governance and business unit empowerment
- Save time, increase productivity and accelerate release cycles
- Ensure content continuity and application availability

Key Features

- Comprehensive content, code & IIS deployments
- Safely delegate deployment jobs to users or groups
- Real-time monitoring and visibility for end users and IT
- Automated/immediate rollback & recovery
- Automated deployment & transforms across multiple targets
- Transactional deployments for unified, point-in-time updates
- Deploy on scheduled/real-time/ad-hoc basis
- Optimized transfer engines for LAN & WAN
- Cross-platform support: Windows/UNIX/LINUX
- Robust API for integration into IT processes
- Auditing & Reporting of processes for regulatory compliance & risk management

What drives the need to adopt Attunity RepliWeb?

- **The DevOps Divide Prevents Adoption of Agile Deployment Methodologies** – Why manage manual web content and code pushes when you can automate the process or empower business owners to deploy content? Attunity RepliWeb allows IT to delegate deployment capabilities to lines of business, accelerating time to market and providing rapid response to user requests. The solution also reduces deployment errors and maintains full audit trails without tying up IT resources.
- **Complex / Dynamic Content and Code Structures** – Enterprise IT environments are more complex than ever before, often employing multiple OS platforms or application environments and straining to meet ever-changing business demands. Attunity RepliWeb provides cross-platform, scheduled, real time, and on-demand file replication, without manual intervention.
- **Distributed Server Infrastructures** – Large, distributed enterprises bring their own set of challenges. Release cycles are complex, and often incorporate diverse applications and computing environments. Attunity RepliWeb overcomes these challenges with cross-platform support, transactional deployments, optimized transfer engines, bandwidth control, integrity checking, rollback on failure, and robust reporting. Attunity RepliWeb is simple and easy to use, able to meet the needs of small IT environments and global organizations alike.

With extensive scheduling, pre/post replication processing and innovative data integrity assurance engines, Attunity RepliWeb offers IT a hassle-free solution for managing critical deployment workflows. Attunity RepliWeb bridges the gap between IT governance and business unit empowerment for deployment processes.
